# Master Programme - Civil Engineering - Materials and Structures in their Environment

YEAR 1 - Autumn Semester

## Algorithmics for Engineering Modeling [ALEMO]

*LEAD PROFESSOR(S): Domenico BORZACCHIELLO / Jose-Vicente AGUADO*

### Objectives

At the end of the course the students will be able to:

- Identify and properly apply numerical methods to different engineering problems
- Understand algorithmic aspects and handle practical implementation issues
- Program and optimize algorithms in Matlab/Octave
- Use standard libraries for scientific computing in Matlab/Octave

### Course contents

The course proposes a gentle introduction to numerical methods in scientific computing and their respective algorithms through practical problems that are often encountered in engineering applications. It will cover five fundamental topics : interpolation and differentiation, numerical quadrature, time-stepping integration techniques for ordinary differential equations, iterative solvers and nonlinear solvers.

Each topic will be presented through a practical application, that will serve as a basis to review implementation aspects as well as theoretical principles of the numerical methods involved. Several exercises in Matlab/Octave are proposed.

## Business Environment [BUSEN]

LEAD PROFESSOR(S): Spencer HAWKRIDGE

### Objectives

- Understand the general concepts of business English and marketing principles
- Understand the principles of given business models (for example: the collaborative economy)
- Build a professional project and explore international opportunities
- Develop strategies for inter-cultural practice
- Organize, lead and participate in discussions, interviews and meetings
- Strengthen self-confidence and level of conviction
- Develop active listening and understanding to reformulate, explain and argue
- Acquire notions of corporate culture and values
- Develop well-being at work and a sense of responsibility
- Enhance team work

### Course contents

Business Environment: exercises to explore in practice the areas of business and marketing

Field-related or inter-cultural project:

- Field-based radio project: prepare, conduct and promote interviews for ECN's radio programme: L'Heure Centralienne (<http://www.euradionantes.eu/emission/l-heure-centralienne>), with the contribution of professors, doctorate students, industrial partners, industry players at fairs, etc.
- Inter-cultural project: construct a myplace4U eZoomBook, using the eZoomBook template. Devise a place branding strategy and analyse its impact on potential users of the myplace4U eZoomBook.
  - BookHoof project: Write, illustrate, edit and format, using Scribus software, a vulgarisation of one of 14 Engineering Challenges of the future, pitched at teenagers. (<http://www.engineeringchallenges.org/challenges.aspx>). Study the business model of the book industry and how the traditional book publishing world has been disrupted by technology.
  - Escape Game: Design, create and implement an escape game (including props and materials) with cultural, scientific and mathematical references and a narrative that runs through the game.

### Course material

Written and televised press, information and digital tools, general documents business environment and company strategies. Internet conferences (Ted Talks, etc.), our own educational materials on Hippocampus (Moodle).

Our own eZoomBook template for the Intercultural project.

# Master Programme - Civil Engineering - Materials and Structures in their Environment

YEAR 1 - Autumn Semester

## Continuum Mechanics [COMEC]

*LEAD PROFESSOR(S): Thomas HEUZE*

### Objectives

This course is an introduction to continuum mechanics, and more generally to the modelling in mechanics. The basic concepts are introduced here, which will be required for more advanced fluid and solid mechanics courses. In its second part, the course focuses on the study of the equilibrium of deformable solid bodies in linear elasticity and infinitesimal strain. This allows to supply some basic tools required for engineers to design simple mechanical systems.

The fundamental concepts introduced in this course are also useful for the courses of fluid mechanics (though recalled within it) and numerical methods (it provides models to be discretized with numerical methods) occurring during the first semester. It is also used as a basis for the course of structural mechanics occurring during the second semester for students that will have chosen the "solid" or "civil engineering" options. A last, it provides useful tools for the course of "Mechanical design analysis" to mechanically design parts.

At the end of the course (30 hours + personal work), the students will:

- understand strain and stress notions, and be able to write correctly their mathematical representation.
- know that there are different kinds of equations with different purposes (balance equations, constitutive equations, boundary conditions).
- Be able to define the problem of the equilibrium of a deformable elastic solid body in infinitesimal strain by writing a Boundary Value Problem (BVP), and to choose the right set of boundary conditions.
- know the different possible approaches available to solve that BVP, and be able to solve it.

### Course contents

After some necessary lectures, the course is built on alternating the introduction of fundamental concepts and training examples, each lasting approximately 2hours.

The course outline is as follows:

- Mathematics for continuum mechanics
- Introduction
- Kinematics
- Stresses
- Balance equations
- Constitutive equations
- Equations of linear elasticity in infinitesimal strain

### Course material

- Introduction to Continuum Mechanics, W. Michael Lai, David Rubin and Erhard Krempl, Elsevier, 2010.
- Continuum Mechanics, A.J.M. Spencer, Dover Publications, 2004.
- Mécanique des Milieux Continus et discrets, Handbook of N. Moës, 2011,

YEAR 1 - Autumn Semester

## Fluid Mechanics 1 [FLUM1]

*LEAD PROFESSOR(S): Guillaume DUCROZET*

### Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Describe the main physical properties of a fluid.
- Identify the specificity of fluid mechanics in the continuum mechanics framework (i.e. compared to solid mechanics).
- Identify the non-dimensional numbers at play in any fluid mechanics problem and deduce how to perform experiments with appropriate similarity.
- Understand the notion of stresses and its representation through stress tensor.
- Describe the physical meaning of each term in the Navier-Stokes' equations
- Identify the different flow regimes.
- Evaluate the generalized force applied on any object in still water.
- Understand when the perfect fluid assumption is valid.

### Course contents

This course aims to present the foundations and general principles of fluid mechanics. The lectures cover the following topics:

- Physics of fluids
- Dimensional analysis
- Stress tensors and fluids
- Navier Stokes' equations
- Flow regimes: introduction to turbulence
- Fluid statics
- Bernoulli's equation for a perfect fluid

In addition to those lectures, tutorials and lab sessions will allow the students to apply the theoretical knowledge to practical configurations.

### Course material

## Numerical Methods [NUMME]

*LEAD PROFESSOR(S): Grégory LEGRAIN*

### Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Classify standard PDEs (elliptic, parabolic, hyperbolic)
- Solve simple elliptic problems by means of finite differences or finite elements
- Assess the accuracy of the schemes they use
- Program finite differences and finite elements in both 1D and 2D

### Course contents

These lectures aim to present classical numerical methods, their features and limitations.

- Classification of PDEs
- Classification of boundary conditions, well-posedness
- Introduction to finite differences (1D, 2D)
- Introduction to finite elements (1D, 2D)

Homework and lab sessions will provide an understanding of the programming and main features of the methods.

## Vibrations and Differential Equations [VIBRA]

*LEAD PROFESSOR(S): Panagiotis KOTRONIS*

### Objectives

At the end of the course the students will be able to:

- Derive the dynamic equilibrium equation using variational principles
- Calculate the stiffness and mass matrices of discrete systems using the Lagrange equations
- Study linear vibrations about an equilibrium position
- Calculate the eigenmodes of discrete and continuum systems
- Apply the modal superposition technique
- Apply the Rayleigh-Ritz method

### Course contents

- Discrete and continuum systems
- Hamilton principle
- Lagrange equations
- Linear vibrations about an equilibrium position
- Eigenmodal analysis
- Modal superposition technique
- Rayleigh-Ritz method

In parallel, an introduction is given on differential equations

## Cultural and Communication English [CCE1]

*LEAD PROFESSOR(S): Spencer HAWKRIDGE*

### Objectives

Introduction to Cultural and Communicational English:

- Understand the general concepts of communication English (different levels of language, etc.)
- Build a communicational project
- Develop strategies for enhanced interaction
- Organize, lead and participate in discussions, interviews and meetings
- Behavioral skills in an inter-cultural environment:
- Strengthen engagement and level of conviction
- Develop a capacity to explain and argue
- Acquire notions of corporate culture and values
- Enhance team work

### Course contents

Cultural and Communicational English: exercises to explore in practice the areas of culture and communication

Inter-cultural project (for example, documentary project, publishing project: construct a work of fiction or of educational value and experience the complete publishing process)

VEC (Virtual Environmental Challenge) Challenge - international competition to design an Eco-campus with participants from French and foreign universities.

### Course material

Written and televised press, information and digital tools, general documents, business environment and company strategies.

Internet conferences (Ted Talks, etc.), our own educational materials on Hippocampus (Moodle).

Our own eZoomBook template for the Intercultural project.

VEC padlet and PMooc ('The stories we live by' - Professor Arran Stibbe lecturing on Ecolinguistics)

# Master Programme - Civil Engineering - Materials and Structures in their Environment

YEAR 1 - Autumn Semester

## Spanish Language [ESP1]

LEAD PROFESSOR(S): *Marta HERRERA*

### Objectives

For beginners:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of vocabulary and linguistic structures

Be able to talk about yourself and those around you

Be able to express oneself during daily activities

Know how to give your opinion

For advanced students:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of specialised vocabulary

Be able to understand the essential content of concrete or abstract subjects including a technical discussion

Be able to communicate spontaneously and fluently

Be able to express oneself in a clear and detailed manner, to express an opinion on a topical subject

### Course contents

For beginners:

Personal environment (introduce yourself, express yourself, your tastes, your character, your hobbies, etc.), your surroundings (friends, family, location, climate), your interests (sports, leisure)

Present tense (regular and irregular)

Language patterns to express habit, obligation, "gustar" and its equivalents,

Possessive adjectives

Differences between "es", "está", "hay"

Use of "por" and "para"

Adverbs and frequency patterns

Numeral adjectives

For advanced students:

Knowledge of the Hispanic world (economic, technical, cultural and social environment)

Present tense (regular and irregular)

Imperative

Past tenses

Direct / indirect style

Future tense

Conditional tense

Present and past subjunctive moods

### Course material

Preparation manuals, our own tailor-made documents, written and internet press, general civilization documents, digital tools

### Assessment

Individual assessment: EVI 1 (coefficient 1)

# Master Programme - Civil Engineering - Materials and Structures in their Environment

YEAR 1 - Autumn Semester

## French Language [FLE1]

LEAD PROFESSOR(S): Silvia ERTL

### Objectives

The objective is to familiarize the learner with the French language and French culture through an entertaining task-based communicative language teaching, focused on speaking combined with:

- Phonetics
- Self-correcting exercises on our learning platform
- Learning Lab activities
- Project work
- Tutoring

Course objectives include the acquisition and reinforcement of vocabulary, syntax, and pronunciation by both traditional means and through the use of digital resources.

Students will learn general French, develop language skills of oral and written comprehension and expression.

After completing this course (32 hours + personal work), the students will be able to communicate in spoken and written French, in a simple, but clear manner, on familiar topics in the context of study, hobbies etc. Another important goal of this course is to introduce the student to French culture. At the end of the course (2 semesters), complete beginners can achieve an A1 level and some aspects of the A2 of The Common European Framework of Reference for Languages. More advanced students may aim for B1/B2 levels.

### Course contents

Full range of practical communication language exercises: reading comprehension, listening comprehension, written expression, oral expression.

Learners will be able to use the foreign language in a simple way for the following purposes:

1. Giving and obtaining factual information:

- personal information (e.g. name, address, place of origin, date of birth, education, occupation)
- non-personal information (e.g. about places and how to get there, time of day, various facilities and services, rules and regulations, opening hours, where and what to eat, etc.)

2. Establishing and maintaining social and professional contacts, particularly:

- meeting people and making acquaintances
- extending invitations and reacting to being invited
- proposing/arranging a course of action
- exchanging information, views, feelings, wishes, concerning matters of common interest, particularly those relating to personal life and circumstances, living conditions and environment, educational/occupational activities and interests, leisure activities and social life

3. Carrying out certain transactions:

- making arrangements (planning, tickets, reservations, etc.) for travel, accommodation, appointments, leisure activities
- making purchases
- ordering food and drink

### Course material

Preparation manuals, our own tailor-made documents, written and televised press, internet, general civilization documents, digital tools, our own educational materials on Hippocampus (Moodle).

## Constitutive Laws [CONLA]

LEAD PROFESSOR(S): *Giulio SCIARRA*

### Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Use thermodynamics to get restrictions on the constitutive laws
- Describe the inelastic behaviour of materials and structures
- Model the elastoplastic response of materials within the framework of continuum mechanics
- Calculate the response of elastoplastic structures
- Theorems of limit analysis

### Course contents

These lectures aim to present the main aspects of modelling irreversible processes within the framework of continuum mechanics. The thermodynamics of irreversible processes (TPI) is introduced as a fundamental tool to obtain a proper characterization of constitutive laws, then plasticity theory is presented in detail.

The lectures will cover the following:

- TPI: conservation laws, the first and the second principle of thermodynamics
- Rheological models
- Modelling the elastoplastic behaviour of materials, main postulates and principles
- Perfect plasticity and hardening plasticity
- Plasticity of structures
- The static and the kinematic theorem

### Course material

## Concrete and Structures [CONST]

*LEAD PROFESSOR(S): Panagiotis KOTRONIS*

### Objectives

At the end of the course the students will be able to:

- Describe the elastic and inelastic behavior of concrete and steel
- Understand the principles of hydrostatic-pressure-independent yield surfaces
- Understand the principles of hydrostatic-pressure-dependent yield surfaces
- Describe the main properties of a proper yield criterion for steel
- Describe the main properties of a proper failure criterion for concrete
- Give examples of plasticity models for steel
- Give examples of plasticity and damage mechanics models for concrete
- Criticize the results of non-linear static and dynamic calculations of reinforced concrete structures

### Course contents

These lectures aim to present the main aspects of the non-linear behaviour of steel, of concrete and of civil engineering structures. The lectures will cover the following:

- 1D Numerical implementation (plasticity)
- Yield criteria for steel
- Failure criteria for concrete
- Examples of non-linear calculations of reinforced concrete structures

### Course material

## Geotechnical Engineering [GEOTC]

LEAD PROFESSOR(S): *Giulio SCIARRA*

### Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Describe the particle-scale interactions in granular materials
- Identify the link between microscale interactions (forces) and macroscopic behavior (stresses) in granular media
- Describe the macroscopic behaviour of soils
- Identify the experimental set-ups necessary to provide a characterization of the constitutive response of soils
- Identify the peculiar states which characterize the behaviour of soils (dilatancy, shear bands formation, liquefaction etc.)
- Use enhanced constitutive model of soils.

### Course contents

These lectures aim to present two different approaches to geotechnical engineering: the first based on the micro-scale description of granular materials (in particular soils) and the second based on a macro-scale approach to the same problem. Links between these two viewpoints are presented and discussed.

The lectures will cover the following:

- Introduction to the physics of granular materials (compaction, segregation, pattern formation, flows and instabilities)
- Granular rheology: experimental and numerical evidence on granular flow, rheological models & boundary conditions
- Tests and experimental results on sands and clays
- The stress path concept: application in the description of drained and undrained conditions
- Peculiar behaviours of soils: dilatancy, shear band formation, liquefaction
- Constitutive model of soils

YEAR 1 - Spring Semester

## Imaging in Civil Engineering [IMAGI]

LEAD PROFESSOR(S): Filippo MASI

### Objectives

At the end of the course, the students will be able to:

- Grasp the theory of a few imaging techniques commonly used in civil engineering
- Use the basics of ImageJ software in image data analysis
- Calculate the displacement and deformation field of a sample deformed in the laboratory, using digital image correlation (2D)
- Choose the most compatible method in a range of imaging techniques for different civil engineering applications.

### Course contents

Imaging techniques are used to an ever-increasing extent in academic and private research to understand and optimize the mechanical behaviour of various materials (concrete, rock, soil, glass etc). This course provides an overview of the main imaging techniques that master students may encounter during their research internships. The advantages and drawbacks of such methods will be presented, as well as their combination with classical techniques in civil engineering.

The course will focus on digital image and volume correlation in particular, with direct applications in deformation monitoring in underground structures.

At the end of the 32 hours, the students should have a preliminary background and training on image techniques and data analysis of civil engineering materials. As a rough guide, the course is broken down into the following parts:

- Why use imaging techniques? Introduction to non-destructive and destructive imaging techniques
- Definition of an image and overview of image acquisition techniques (camera with simple pictures, x-ray tomography, electron microscopy etc)
- Continuity of techniques from 2D, 3D (laboratory experiments) to 4D (time-resolved Synchrotron imaging)
- Combination of imaging techniques with classical techniques in civil engineering (deformation in triaxial conditions under x-ray tomography for example)
- Overview of image analysis techniques to extract quantitative data (optical full measurement techniques, segmentation, filtering)
- Advantages and drawbacks of imaging techniques (resolution, scale, combination with other methods etc)
- Applications in civil engineering, petroleum and nuclear waste contexts

Homework and lab sessions will provide an understanding of the major processes used in the composites industry.

## Mathematical Methods in Civil Engineering [MMCE]

LEAD PROFESSOR(S): *Giulio SCIARRA*

### Objectives

Consolidation of basic mathematical skills essential in the Civil Engineering Master program.

### Course contents

Linear algebra

Hilbert spaces – Infinite dimensional vector spaces. Fourier series. Linear operators.

Calculus of variations – Maxima and minima of functionals, Lagrange equations. Boundary Value Problems of civil engineering. Eigenvalues and eigenfunctions.

Boundary Value Problems – Separation of variables. Sturm-Liouville problems. Series solutions of boundary value problems.

## Physical Modelling [PHYMD]

*LEAD PROFESSOR(S): Luc THOREL*

### Objectives

Introduction to the use of reduced-scale models in Civil Engineering. We draw upon the exceptional concentration of large-scale test facilities and scientific expertise in the Nantes area (geotechnical centrifuge, wind tunnels, towing tank and wave tank, semi-anechoic room, laser interferometry measurement bench). Knowledge of the basics of physical modelling, use of scaling laws, interpretation of experimental results.

### Course contents

The course starts with an overview of scaling laws and similitude problems, followed by a presentation of the main tools used for their analysis and by specific applications in the following fields:

- Geotechnics
- Aerodynamics
- Hydrodynamics
- Acoustics
- Geophysics

After completing this course (32 hours + personal work), the students will be able to communicate in spoken and written French, in a simple, but clear manner, on familiar topics in the context of study, hobbies etc. Another important goal of this course is to introduce the student to French culture. At the end of the course (2 semesters), complete beginners can achieve an A1 level and some aspects of the A2 of The Common European Framework of Reference for Languages. More advanced students may aim for B1/B2 levels.

### Course contents

Full range of practical communication language exercises: reading comprehension, listening comprehension, written expression, oral expression.

Learners will be able to use the foreign language in a simple way for the following purposes:

1. Giving and obtaining factual information:

- personal information (e.g. name, address, place of origin, date of birth, education, occupation)
- non-personal information (e.g. about places and how to get there, time of day, various facilities and services, rules and regulations, opening hours, where and what to eat, etc.)

2. Establishing and maintaining social and professional contacts, particularly:

- meeting people and making acquaintances
- extending invitations and reacting to being invited
- proposing/arranging a course of action
- exchanging information, views, feelings, wishes, concerning matters of common interest, particularly those relating to personal life and circumstances, living conditions and environment, educational/occupational activities and interests, leisure activities and social life

3. Carrying out certain transactions:

- making arrangements (planning, tickets, reservations, etc.) for travel, accommodation, appointments, leisure activities
- making purchases
- ordering food and drink

## Course material

---
