## Master Programme - Industrial Engineering - EIT Manufacturing

YEAR 2 - Autumn Semester

# Artificial Intelligence for Decision Making in Industrial Engineering [AI4IE]

LEAD PROFESSOR(S): Catherine DA CUNHA

### Objectives

At the end of the course, the students will be able to understand the main applications of artificial intelligence to support decision making in industrial engineering. The course will address the problematics of decision making based on both formal and qualitative approaches.

### Course contents

The key elements to be introduced in this course are the following:

- Introduction to Smart Decision Aid systems
- Big data and Data mining
- Machine learning and neural networks
- Fuzzy logic for decision aid
- Decision tree
- Case-based reasoning

### Course material

Datamining : Concepts and techniques. Han & Kamber, Morgan Kaufmann 2000

### Assessment

Individual assessment: EVI 1 (coefficient 1)

LANGUAGE OF INSTRUCTION	ECTS CREDITS	LECTURES	TUTORIALS	LAB	PROJECT	EXAM
English	5	14 hrs	8 hrs	8 hrs	2 hrs	0 hrs

# Master Programme - Industrial Engineering - EIT Manufacturing

YEAR 2 - Autumn Semester

## Collaborative Information Systems in the Enterprise [CISE]

LEAD PROFESSOR(S): Farouk BELKADI

### Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Understand the role of information systems (EIS) in the enterprise and their main functions
- Design simple data bases with query (Microsoft Access/Excel)
- Manipulate the main functions of ERP systems (Enterprise Resources Planning)
- Manipulate the main functions of PLM systems (Product Lifecycle Management)
- Manipulate the main mechanisms of customization and administration of collaborative EIS

### Course contents

This course aims to present the main functions of collaborative enterprise information systems (EIS), classified according to the main business processes of the enterprise. An overview of the main commercial ERP/PLM tools is provided to clarify the scope of these tools. After this introduction, the following items will be presented in detail:

- Introduction to enterprise information systems
  - o Concepts related to enterprise information systems
  - o Types of enterprise information system
- Main functions of ERP
  - o Marketing and sales
  - o Supply chain management
  - o Production Management
  - o Introduction to OpenERP and Sage ERP tools
- Main Functions of PLM
  - o Product configuration (eBOM)
  - o Data-file management (volt, check-in, check-out, version, iteration)
  - o Notion of Lifecycles and workflows
  - o Notion of Workspace and collaborative functions (notification, viewer, etc.)
  - o Data searching, where use function, connection to CAO
  - o Introduction to Audros and Windchill PLM tools
- Administration of PLM
  - o Management of organization, team, users and roles
  - o Creation of customized workflows and lifecycles
  - o Customization of data model with Audros Model Shape
- Main functions of MES
  - o Creation of production process, execution, realtime control of manufacturing process

A simple use case will be conducted during the tutorials to show how different processes and data will be managed and implemented in different tools.

# Master Programme - Industrial Engineering - EIT Manufacturing

YEAR 2 - Autumn Semester

## Integrated Design and Implementation of CPPS [CPPS]

LEAD PROFESSOR(S): *Olivier CARDIN*

### Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Express the main characteristics and benefits of cyber-physical production systems
- Model a heterarchical manufacturing control architecture
- Integrate the basics of holonic paradigms
- Implement a cyber-physical production system using multi-agent technologies

### Course contents

The lectures aim to introduce the following concepts:

- Systems of cyber-physical production systems;
- Heterarchical manufacturing control;
- Holonic manufacturing systems;
- Emerging behavior and bio-inspired systems;
- Cloud Manufacturing.

After an introduction lecture, practical classes will lead to a development project in full autonomy using an automated, robotized and emulated manufacturing system.

YEAR 2 - Autumn Semester

# Data and Knowledge Integration in the Enterprise [DKIE]

LEAD PROFESSOR(S): Farouk BELKADI

### Objectives

At the end of the course, the students will be able to understand the main concepts and methods of integrated design and development of product service systems (PSS), from business, organizational, engineering and technological perspectives. Lessons learned from recent projects are summarized in order to explain how the current challenges of socio-economic sustainability are addressed in both industry and scientific domains, in the new era of enterprise of the future. A focus will be made on the advantage of new data driven and communication technologies to support innovative PSS businesses.

### Course contents

The structure of this course will be divided in five main sections:

- Definition of socio-organisational sustainability and related paradigms (circular economy, frugality, Product-Service systems)
- Innovation methods for product-service systems design (blueprinting, scenario based, etc.)
- Organizational aspects PSS
- Technological aspects related to PSS
- Product-service systems lifecycle design and management based on system engineering

### Course material

YEAR 2 - Autumn Semester

## Multicriteria Decision Making and Decision Support [MDMDS]

LEAD PROFESSOR(S): *Raphaël CHENOARD*

### Objectives

At the end of the course (30 hours + personal homework) the students will be able to:

- Understand decision problems
- Use some decision-making methods to choose a solution among others
- Solve multi-objective decision problems

### Course contents

These lectures aim to present the main elements of multi-criteria decision making and decision support methods and tools:

- Introduction to decision theory
- Multicriteria decision methods (AHP, ELECTRE)
- Design of experiments
- Multi-objective optimization

Practical exercises and homework will help students to apply the learned concepts and methods.

### Course material

YEAR 2 - Autumn Semester

## Cultural and Communication English [CCE3]

LEAD PROFESSOR(S): *Spencer HAWKRIDGE*

### Objectives

Team-building and Communicational English:

- Understand the general concepts of team-building
- Build a team-building project
- Understand and nurture the creative process
- Enhance self-belief and self-empowerment

Behavioral skills in an inter-cultural environment:

- Strengthen self-confidence and capacity for interaction
- Develop active listening and reformulation skills
- Develop networking skills

### Course contents

Cultural and Communicational English: exercises to explore in practice the areas of culture and communication  
Field-related or inter-cultural project (for example, construct content for inter-cultural teambuilding activities; example WIOBOX website etc).

### Course material

Written and televised press, information and digital tools, general documents business environment and company strategies. Internet conferences (Ted Talks, etc.), our own educational materials on Hippocampus (Moodle).

### Assessment

Individual assessment: EVI 1 (coefficient 1.0)

LANGUAGE OF INSTRUCTION	ECTS CREDITS	LECTURES	TUTORIALS	LAB	PROJECT	EXAM
English	4	0 hrs	32 hrs	0 hrs	0 hrs	0 hrs

# Master Programme - Industrial Engineering - EIT Manufacturing

YEAR 2 - Autumn Semester

## Spanish Language [ESP3]

LEAD PROFESSOR(S): *Marta HERRERA*

### Objectives

For beginners:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of vocabulary and linguistic structures

Be able to talk about yourself and those around you

Be able to express oneself during daily activities

Know how to give your opinion

For advanced students:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of specialised vocabulary

Be able to understand the essential content of concrete or abstract subjects including a technical discussion

Be able to communicate spontaneously and fluently

Be able to express oneself in a clear and detailed manner, to express an opinion on a topical subject

### Course contents

For beginners:

Personal environment (introduce yourself, express yourself, your tastes, your character, your hobbies, etc.), your surroundings (friends, family, location, climate), your interests (sports, leisure)

Present tense (regular and irregular)

Language patterns to express habit, obligation, "gustar" and its equivalents,

Possessive adjectives

Differences between "es", "está", "hay"

Use of "por" and "para"

Adverbs and frequency patterns

Numeral adjectives

For advanced students:

Knowledge of the Hispanic world (economic, technical, cultural and social environment)

Present tense (regular and irregular)

Imperative

Past tenses

Direct / indirect style

Future tense

Conditional tense

Present and past subjunctive moods

### Course material

Preparation manuals, our own tailor-made documents, written and internet press, general civilization documents, digital tools

### Assessment

Individual assessment: EVI 1 (coefficient 1)

LANGUAGE OF INSTRUCTION	ECTS CREDITS	LECTURES	TUTORIALS	LAB	PROJECT	EXAM
English	4	0 hrs	32 hrs	0 hrs	0 hrs	0 hrs

# Master Programme - Industrial Engineering - EIT Manufacturing

YEAR 2 - Autumn Semester

## French Language [FLE3]

LEAD PROFESSOR(S): *Silvia ERTL*

### Objectives

The objective is to familiarize the learner with the French language and French culture through an entertaining task-based communicative language teaching, focused on speaking combined with:

- Phonetics
- Self-correcting exercises on our learning platform
- Learning Lab activities
- Project work
- Tutoring

Course objectives include the acquisition and reinforcement of vocabulary, syntax, and pronunciation by both traditional means and through the use of digital resources. Students will learn general French, develop language skills of oral and written comprehension and expression.

After completing this course (32 hours + personal work), the students will be able to communicate in spoken and written French, in a simple, but clear manner, on familiar topics in the context of study, hobbies etc. Another important goal of this course is to introduce the student to French culture.

At the end of the course, complete beginners can achieve an A1 level and some aspects of the A2 of The Common European Framework of Reference for Languages. More advanced students may aim for B1/B2 levels. Those who already completed the first year of the French course will be prepared for working in a French business environment.

### Course contents

Two different tracks are proposed: track 1 for students newly arrived at Centrale Nantes and track 2 for students who have completed the first year of the French course. Track 1:

Full range of practical communication language exercises: reading comprehension, listening comprehension, written expression, oral expression.

Learners will be able to use the foreign language in a simple way for the following purposes:

1. Giving and obtaining factual information:

- personal information (e.g. name, address, place of origin, date of birth, education, occupation)
- non-personal information (e.g. about places and how to get there, time of day, various facilities and services, rules and regulations, opening hours, where and what to eat, etc.)

2. Establishing and maintaining social and professional contacts, particularly:

- meeting people and making acquaintances
- extending invitations and reacting to being invited
- proposing/arranging a course of action
- exchanging information, views, feelings, wishes, concerning matters of common interest, particularly those relating to personal life and circumstances, living conditions and environment, educational/occupational activities and interests, leisure activities and social life

3. Carrying out certain transactions:

- making arrangements (planning, tickets, reservations, etc.) for travel, accommodation, appointments, leisure activities
- making purchases
- ordering food and drink

### Track 2:

This track follows on directly from the first-year French course, developing and completing the concepts studied thus far. The main themes are: housing, health and work. These topics will help prepare students for their future work environment. For example, housing is explored in the form of a search for accommodation upon arrival in a new city. Special workshops for CVs and cover letters, elevator pitches and job interviews.

### Course material

# Master Programme - Industrial Engineering - EIT Manufacturing

YEAR 2 - Spring Semester

## Internship / Thesis project [THESIS]

LEAD PROFESSOR(S): Catherine DA CUNHA

### Objectives

- Be exposed to and adapt to an industrial or research environment
- Put in practice the scientific and technical skills acquired in the previous semesters
- Strengthen interpersonal and communication skills
- Be part of or manage a project
- Organize tasks, analyze results and build deliverables

### Course contents

Students should be pro-active and career-oriented in the search for their thesis/internship. The topics are validated by the program supervisor to ensure an adequate Master level. The thesis/internship is evaluated through the submission of a written report and an oral defense.

### Course material
