## CORE COURSES

Course code	Title	ECTS Credits
THESIS	Master Thesis or Internship	30

# Master Programme - City and Urban Environments - Atmosphere, Water and Environment

YEAR 2 - Autumn Semester

## Urban Climate and Energy [CLIMEN]

LEAD PROFESSOR(S): Isabelle CALMET

### Objectives

The aim of this course is to provide students with knowledge about the urban climate from city to neighbourhood scales, adaption and mitigation strategies to climate change and link between urban climate and energy demand. At the end of the course the students will be able to:

- Understand the urban climate issues
- Master the relationship between the energy fluxes exchanged between urban canopy and atmosphere, urban morphology and land-use, and urban climate
- Understand how urban planning can act on climate adaptation and mitigation
- Calculate the different energy flux exchanged at the surface of a complex urban surface (canyon street or surface covered with vegetation)
- Assess building energy demand at district scale

### Course contents

This lecture aims to present:

- The urban heat island: cause and link with the energy budget of the urban canopy
- Climate modelling at city scale: urban surface energy budget (SEB) models coupled with atmospheric model
- The characteristics of a SEB model which will be used to compute energy fluxes between canopy and atmosphere and assess mitigation strategies at city scale
- The different ways to assess indoor and outdoor thermal comfort
- Climate modelling from the district to the building's environment scale
- The different local climate adaptation strategies and their impact on building energy demand
- The calculation of building energy demand at district to city scale

### Course material

YEAR 2 - Autumn Semester

## Case studies in the urban environment [CSU]

*LEAD PROFESSOR(S): Boris CONAN*

### Objectives

The objective of this course is to put into practice the skills and knowledge acquired in the different courses of the training around an applied subject. Two topics are proposed to cover the whole training. Students are expected to:

- Be active team members in the projects,
- Manage their time according to the deadlines given for the progress (and final) reports,
- Write reports presenting their work,
- Investigate a new topic in a framework which differs from academic training,
- Improve their knowledge through practice and their ability to analyze the subject.

### Course contents

Work will be done in pairs during the scheduled courses and outside of class time. Regular reports will be presented as well as a final restitution.

### Course material

All courses

YEAR 2 - Autumn Semester

## Meteorology and Atmospheric Boundary Layers [METABL]

LEAD PROFESSOR(S): Boris CONAN

### Objectives

The aim of this course is to provide students with the theoretical basics on meteorology and atmospheric boundary layer physics. At the end of the course the students will be able to:

- Understand general mechanisms of meteorology
- Master the overall organization of the atmosphere
- Make and analyse a Skew-T plot
- Analyse meteorological data
- Determine the atmospheric stratification
- Understand the influence of the surface energy budget on the atmospheric turbulence and diurnal and vertical evolution of the meteorological variables within the atmospheric boundary layer
- Master the Monin-Obukhov similarity theory for the atmospheric surface layer
- Calculate wind and temperature profiles in the surface layer based on in situ measurements

### Course contents

This lecture aims to present the:

- Global mechanisms involved in meteorology and phenomenology
- Thermodynamic transformations of air in the atmosphere
- General equations of meteorology
- Simplified equations of the atmospheric boundary layer and surface layer flows
- Theoretical knowledge about the dynamics of the atmospheric boundary layer
- Surface energy budget and the link with stratification conditions
- Monin-Obukhov similarity theory and applications

### Course material

- Stull, R., 2017: "Practical Meteorology: An Algebra-based Survey of Atmospheric Science" -version 1.02b. Univ. of British Columbia. 940 pages. Isbn 978-0-88865-283-6.

YEAR 2 - Autumn Semester

## Urban Pollution [POLLU]

LEAD PROFESSOR(S): *Isabelle CALMET*

### Objectives

The aim of this course is to provide students with knowledge about urban air and soil pollution. This course is divided in three complementary parts addressing the chemistry of urban air pollution, the pollutant dispersion in the atmosphere and the urban soil quality issues.

At the end the first part, it is expected the students be able to:

- Master the fundamentals of atmospheric chemistry (chemical kinetics, mechanisms of air pollutant formation)
- Understand how different atmospheric regimes lead to distinct relationships between air pollutant levels and urban emissions
- Develop the expertise needed to design efficient emission control strategy for gaseous pollutants and atmospheric particles thanks to a comprehensive knowledge of the formation of urban air pollution
- Apply that knowledge to real-world situations.

At the end of the second part, the students will be able to:

- Understand the link between the dynamics of the atmosphere and the pollutant dispersion
- Apply simple dispersion models and understand their limitations (in terms of scale and application)

At the end of the third part, the students will be able to:

- Describe the main properties of urban soils depending on the land-use
- Explain what are the ecosystem functions and services of urban soils

### Course contents

Part 1 - Chemistry of urban air pollution

- Main sources of air pollutants
- Formation of gaseous urban air pollutants (ozone, nitrogen dioxide,...)
- Dynamics and formation of atmospheric particles.

The approach will consist of lectures on the conceptual and theoretical aspects of air pollution chemistry and applications to actual case studies. The two case studies used in class are a summer ozone episode and a spring particulate matter episode in the Paris region. The aim is to develop emission control strategies to reduce air pollutant levels for those two episodes using the knowledge acquired during the lectures.

Part 2 - Pollutant dispersion in the atmosphere

- Factors that govern or influence the dispersion process (meteorology, turbulence, stratification, buildings, orography...)
- Gaussian models (semi-empirical plume and puff models): Theory and application for estimating the pollutant concentration in simple configurations;
- Presentation of usual numerical approaches (CFD-based) for pollutant dispersion simulation.

Part 3 – Pollution of urban soils

- Specificities of urban soils
- Ecosystem functions and services of urban soils.

Some examples of land-use and associated soil quality will be presented and a visit of an urban allotment garden is foreseen to illustrate the topic.

YEAR 2 - Autumn Semester

## Turbulence : Theory, Modeling and Analysis [TURB]

LEAD PROFESSOR(S): Laurent PERRET

### Objectives

The aim of this course is to provide students with theoretical basics on turbulent flows and modelling approaches in CFD codes. At the end of the course the students will be able to:

- Grasp turbulent flow physics
- Use various statistics to characterize turbulent flows
- Derive equations for averaged variables
- Understand the concepts of various modelling approaches of turbulent flows (RANS, LES)
- Master the requirements associated with modelling approaches in terms of CFD: computational domains, grid size, boundary conditions, etc
- Design, perform and analyse CFD simulations for incompressible turbulent flow in simple configurations using RANS modelling

### Course contents

This course aims to present:

- An introduction to turbulent flows and their physics
- The basic concepts and tools used to study turbulent flows
- The scales of turbulent flows and the energy cascade
- The equations for the averaged variables (Reynolds Averaged Navier-Stokes (RANS) equations)
- The near wall behaviour of turbulent flows
- Some closure models for Reynolds Averaged Navier-Stokes (RANS) equations
- The concept of Large Eddy Simulation (LES) and subgrid-scale modelling
- The main requirements and best choices to design a numerical simulation of turbulent flow according to the modelling approach

### Course material

- Davidson, P. A. (2015), Turbulence: An Introduction for Scientists and Engineers, Oxford University Press.
- Pope, S. B. (2000), Turbulent Flows, Cambridge University Press.
- Wyngaard, J. C. (2010), Turbulence in the Atmosphere, Cambridge University Press.

YEAR 2 - Autumn Semester

## Urban Water Management and Modelling [WAM]

*LEAD PROFESSOR(S): Fabrice RODRIGUEZ / Isabelle CALMET*

### Objectives

At the end of the course the students will be able to:

- Grasp the basics of both traditional storm and waste-water systems and Sustainable Urban Drainage Systems (SUDS)
- Design sewer pipes
- Use a simple urban hydrological model
- Analyse the main trends of a rainfall-runoff data series applied to an urban catchment
- Grasp the quality of storm water and waste water
- Describe the composition of sediments from SUDS and evaluate pollution levels
- Assess the environmental risk associated with pollutant content and propose sediment management techniques

### Course contents

This course aims to present:

- Sewer systems in the city: description and design
- Sustainable urban drainage systems: principles and scientific and user feedback
- Storm water urban hydrological modelling
- Waste water: quality and treatment basics
- Storm water: quality and pollution level measurements
- Characteristics and quality of sediments from SUDS
- Risk evaluation
- Sediment management

YEAR 2 - Autumn Semester

## Cultural and Communication English [CCE3]

*LEAD PROFESSOR(S): David TROYA*

### Objectives

Team-building and Communicational English:

- Understand the general concepts of team-building
- Build a team-building project
- Understand and nurture the creative process
- Enhance self-belief and self-empowerment

Behavioral skills in an inter-cultural environment:

- Strengthen self-confidence and capacity for interaction
- Develop active listening and reformulation skills
- Develop networking skills

### Course contents

Cultural and Communicational English: exercises to explore in practice the areas of culture and communication  
Field-related or inter-cultural project.

### Course material

Written and televised press, information and digital tools, general documents business environment and company strategies.  
Internet conferences (Ted Talks, etc.), our own educational materials on Hippocampus (Moodle).

# Master Programme - City and Urban Environments - Atmosphere, Water and Environment

YEAR 2 - Autumn Semester

## Spanish Language [ESP3]

LEAD PROFESSOR(S): Marta HERRERA

### Objectives

For beginners:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of vocabulary and linguistic structures

Be able to talk about yourself and those around you

Be able to express oneself during daily activities

Know how to give your opinion

For advanced students:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of specialised vocabulary

Be able to understand the essential content of concrete or abstract subjects including a technical discussion

Be able to communicate spontaneously and fluently

Be able to express oneself in a clear and detailed manner, to express an opinion on a topical subject

### Course contents

For beginners:

Personal environment (introduce yourself, express yourself, your tastes, your character, your hobbies, etc.), your surroundings (friends, family, location, climate), your interests (sports, leisure)

Present tense (regular and irregular)

Language patterns to express habit, obligation, "gustar" and its equivalents,

Possessive adjectives

Differences between "es", "está", "hay"

Use of "por" and "para"

Adverbs and frequency patterns

Numeral adjectives

For advanced students:

Knowledge of the Hispanic world (economic, technical, cultural and social environment)

Present tense (regular and irregular)

Imperative

Past tenses

Direct / indirect style

Future tense

Conditional tense

Present and past subjunctive moods

### Course material

Preparation manuals, our own tailor-made documents, written and internet press, general civilization documents, digital tools

### Assessment

Individual assessment: EVI 1 (coefficient 1)

LANGUAGE OF INSTRUCTION	ECTS CREDITS	LECTURES	TUTORIALS	LAB	PROJECT	EXAM
Spanish	2	0 hrs	32 hrs	0 hrs	0 hrs	0 hrs

# Master Programme - City and Urban Environments - Atmosphere, Water and Environment

YEAR 2 - Autumn Semester

## French Language [FLE3]

LEAD PROFESSOR(S): *Silvia ERTL*

### Objectives

The objective is to familiarize the learner with the French language and French culture through an entertaining task-based communicative language teaching, focused on speaking combined with:

- Phonetics
- Self-correcting exercises on our learning platform
- Learning Lab activities
- Project work
- Tutoring

Course objectives include the acquisition and reinforcement of vocabulary, syntax, and pronunciation by both traditional means and through the use of digital resources. Students will learn general French, develop language skills of oral and written comprehension and expression.

After completing this course (32 hours + personal work), the students will be able to communicate in spoken and written French, in a simple, but clear manner, on familiar topics in the context of study, hobbies etc. Another important goal of this course is to introduce the student to French culture.

At the end of the course, complete beginners can achieve an A1 level and some aspects of the A2 of The Common European Framework of Reference for Languages. More advanced students may aim for B1/B2 levels. Those who already completed the first year of the French course will be prepared for working in a French business environment.

### Course contents

Two different tracks are proposed: track 1 for students newly arrived at Centrale Nantes and track 2 for students who have completed the first year of the French course. Track 1:

Full range of practical communication language exercises: reading comprehension, listening comprehension, written expression, oral expression.

Learners will be able to use the foreign language in a simple way for the following purposes:

1. Giving and obtaining factual information:

- personal information (e.g. name, address, place of origin, date of birth, education, occupation)
- non-personal information (e.g. about places and how to get there, time of day, various facilities and services, rules and regulations, opening hours, where and what to eat, etc.)

2. Establishing and maintaining social and professional contacts, particularly:

- meeting people and making acquaintances
- extending invitations and reacting to being invited
- proposing/arranging a course of action
- exchanging information, views, feelings, wishes, concerning matters of common interest, particularly those relating to personal life and circumstances, living conditions and environment, educational/occupational activities and interests, leisure activities and social life

3. Carrying out certain transactions:

- making arrangements (planning, tickets, reservations, etc.) for travel, accommodation, appointments, leisure activities
- making purchases
- ordering food and drink

### Track 2:

This track follows on directly from the first-year French course, developing and completing the concepts studied thus far. The main themes are: housing, health and work. These topics will help prepare students for their future work environment. For example, housing is explored in the form of a search for accommodation upon arrival in a new city. Special workshops for CVs and cover letters, elevator pitches and job interviews.

### Course material

English	2	0 hrs	32 hrs	0 hrs	0 hrs	0 hrs

# Master Programme - City and Urban Environments - Atmosphere, Water and Environment

YEAR 2 - Spring Semester

## Master Thesis or Internship [THESIS]

LEAD PROFESSOR(S): Isabelle CALMET

### Objectives

- Be exposed to and adapt to an industrial or research environment
- Put in practice the scientific and technical skills acquired in the previous semesters
- Strengthen interpersonal and communication skills
- Be part of or manage a project
- Organize tasks, analyze results and build deliverables

### Course contents

Students should be pro-active and career-oriented in the search for their thesis/internship. The topics are validated by the program supervisor to ensure an adequate Master level. The thesis/internship is evaluated through the submission of a written report and an oral defense.
