

Master

Mechanical Engineering

## ADVANCED COMPOSITE ENGINEERING AND SCIENCE

### OBJECTIVES

This Master programme develops skills for providing innovative and optimized solutions in the design and manufacturing of composite materials for research and in industry.

The performance of fibre-reinforced organic-matrix composites and structures are influenced by the constituting materials and the processing stage. Composite mechanical design can be efficiently and optimally performed when one has a good understanding of the manufacturing's influences and constraints. Therefore the curriculum offered in this programme will provide a theoretical and experimental emphasis on the relationships between constituents, processing and structural design.

### SKILLS

#### Specialism-specific

- > Simulate and optimize composite mechanical design and manufacturing using numerical tools
- > Model materials' behaviour and physics involved in composite processes
