

## 2<sup>ND</sup> AND 3<sup>RD</sup> YEAR SPECIALISATION

# ENERGY PRODUCTION AND MANAGEMENT

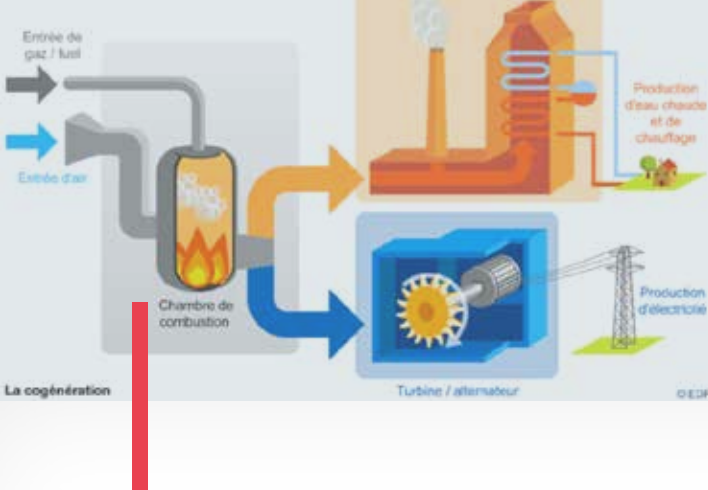

Improvements in energy efficiency, the development of renewable energies and energy storage are amongst the main challenges facing engineers today. It is within this context that this specialisation aims to provide general engineering students with the skills to deal with cross- and multi-disciplinary issues linked to energy. The following fields are covered:

- > conventional energy production
- > renewable energy production (wind, solar and thermal power...)
- > energy management, transport and storage
- > efficient use of energy particularly in industry and construction
- > consideration of the environmental constraints linked to energy (depollution of energy production systems).
