

Press release

Nantes, 3 October 2019

Monday 7 October marks the start of the first "Web in pulse" training programme at Centrale Nantes: a free training course for web-developers, for which no previous experience or qualifications are required.

Centrale Nantes's "Web in Pulse" programme is certified 'Grande Ecole du Numérique'. This state certification includes over 750 courses that are primarily intended for people with limited employment opportunities. Web in Pulse is thus designed for young people between the ages of 18 and 30 with little or no education, and its first intake includes more than 40% of women.

Asked about the importance of her company's partnership with Centrale Nantes as part of this programme, Jihane Baciocchini, Capgemini's Director of Recruitment France, said: "*the benefits are twofold: we need to innovate in sourcing, to find new solutions to the shortage of digital staff and to bring more diversity into our teams*". In fact, "*the Capgemini Group has committed to recruiting 10% of candidates in France from courses with the 'Grande Ecole du Numérique' certification, which includes Web in Pulse*"

Web in Pulse aims to address the needs of companies based in Nantes and its region by training the developers they are looking for. On 7 October, 14 people will join the programme for 625 hours of classes and a five-week internship. The programme is divided into four training modules: introduction to the digital sector, front-end, back-end and web project management.

Other than the age requirements, trainees must be seeking employment, show a real interest in the web and a real desire to learn. Upon successful completion of the programme, the young developers are awarded a certificate from Centrale Nantes and they may also benefit from the school's partnership with local businesses and local authorities to find employment.

Over and above training in the strict sense of the term, Centrale Nantes offers support and follow-up to Web in Pulse trainees. It's a friendly environment with truly individual coaching provided across the board to ensure success.

Selim Deleurme, a trainee in the first intake, said: "*The acquisition of relevant professional IT skills and the quality of the training provided by Centrale Nantes have inspired me to become a web developer. This step will be a great springboard for me to gain access to this fast-growing profession in the job market.*"

While Centrale Nantes is best known for its engineering programme, the school also offers executive education programmes. These programmes are designed for both in post executives and engineers who are seeking to enhance their scientific and managerial skills, as well as for people looking to make a career change into the digital sector.

About Centrale Nantes

Founded in 1919, Centrale Nantes is a French engineering school and member of the Ecoles Centrale Group. Its undergraduate, Master and PhD programmes are based on the latest scientific and technological developments and the best management practices. At Centrale Nantes, research and training are organised into three key areas for growth and innovation: manufacturing, energy transition and healthcare. With research platforms ranging from digital simulation to prototyping using full scale models and an incubator with 20 years of experience in supporting start-up projects, the school has two major tools for innovation and creation, working hand in hand with industry. Centrale Nantes promotes its teaching and research capabilities at international level through around 100 partnerships with prestigious universities and schools worldwide.

Centrale Nantes welcomes 2,410 students, including 1,440 undergraduate students, 170 Executive Education and ITII degree apprenticeship students, 270 PhD students, 430 Masters students, and 100 Bachelor/Foundation Master students on its 40-acre campus.
