YEAR 2 - Autumn Semester

Advanced Research Project [REPRO2]

LEAD PROFESSOR(S): Pierre-Emmanuel HLADIK

Objectives

This module extends the research initiation experience through a follow-up project aimed at strengthening students' understanding of the scientific methodology. It focuses on bibliographic research, critical analysis of the state of the art, and the structuring of a scientific or technical project. The module also prepares students for their internship by developing their ability to define a topic, set clear objectives, and communicate effectively in written and oral form.

Sustainable Development Goals (SDGs) covered by this course

Industry, innovation and infrastructure / Quality education

Sustainable Development and Social Responsibility Positioning

This course promotes a responsible and sustainable research approach by training students to conduct rigorous, well-documented, and reproducible scientific work. Through critical use of bibliographic resources and careful project definition, it encourages responsible knowledge production, efficient use of research resources, and preparation for internships with a positive scientific, industrial, and societal impact.

Assessment

Advanced Modeling of Robots [AMORO]

LEAD PROFESSOR(S): *Sebastien BRIOT*

Objectives

This course presents advanced modelling techniques (geometric, kinematic and dynamic) of robots (tree structure robots, parallel robots, and hybrid robots) composed of rigid links.

At the end of the course the students will be able to:

- Understand the fundamentals of the mathematical models of robots and their applications in robot design, control and simulation.
- Analyse the mobility of parallel robots and understand the notion of operation modes
- Analyse, identify and illustrate the serial and parallel (including the constraint) singularities of parallel robots
- Identify the geometric and dynamic parameters of a robot
- Use the best methods to develop the required models of a given architecture
- Apply the given techniques to other systems such as mobile robots or passenger cars
- Use the convenient numerical schemes for numerical integration.
- Use modelling, optimization, and signal processing tool box software packages (Matlab, Adams).

Course contents

- Description of complex mechanical systems (tree-structured or closed loop systems),
- Geometric and kinematic models of closed-loop structure robots, constraints equations, mobility analysis, singularity analysis (introduction to DHm convention of tree-structured and closed loop systems)
- Workspace analysis of full-mobility and lower-mobility parallel robots
- Calibration of geometric parameters
- Reminder of dynamics principles (Newton-Euler, Euler-Lagrange, Principle of virtual works) for open and closed-loop mechanism systems
- Dynamic modelling of rigid tree-structure robots: the inverse and direct dynamic problems, the base inertial parameters, computation of the ground forces.
- Dynamic modelling of rigid parallel robots without and with actuation redundancy: the inverse and direct dynamic problems, the base inertial parameters, computation of the ground forces.
- Analysis of the degeneracy conditions of the dynamic model of rigid parallel robots, and singularity crossing
- Identification of dynamic parameters

Practical Work: Exercises will be set, involving modelling, identification and simulation of robots. Advanced technical papers from recent international conferences will be analysed and reviewed.

Course material

YEAR 2 - Autumn Semester

Autonomous Vehicle [AUVE]

LEAD PROFESSOR(S): Elwan HERY

Objectives

This course presents the basics of perception, localization, mapping and path planning for intelligent and autonomous vehicles. Topics covered will include:

- LiDAR perception
- Mapping with occupancy grid using SLAM (Simultaneous Localization And Mapping)
- GNSS localization and geographic to Cartesian coordinates transformation
- Map for road navigation
- V2X (vehicle to everything) communication
- Global path planning using map or occupancy grid and local path planning based on tentacles paradigm

Course contents

- Introduction to autonomous vehicles and Intelligent Transport Systems (ITS)
- LiDAR perception
- SLAM (Simultaneous Localization And Mapping)
- GNSS localization
- Map for autonomous vehicles navigation
- V2X (vehicle to everything) communication
- Global and local path planning

Sustainable Development Goals (SDGs) covered by this course

Decent work and economic growth / Good health and well-being / Industry, innovation and infrastructure / Reduced inequalities / Sustainable cities and communities

Sustainable Development and Social Responsibility Positioning

Autonomous vehicles could significantly reduce the number of road accidents, as 90% of them are caused by human factors. They would also enable people who cannot drive, such as people with reduced mobility or visual impairments, to travel more freely. Finally, they would encourage car sharing and thus reduce the number of vehicles on the road.

Advanced Visual Geometry [AVG]

LEAD PROFESSOR(S): Vincent FRÉMONT

Requirements

- 3D Geometry
- Linear Algebra
- Image processing and computer vision
- Optimization

Objectives

This course presents the fundamentals of advanced vision-based perception algorithms. Vision is one of the most promising senses to be used in robotics, providing important geometrical information on the surroundings of the robot. In this way, two-view geometry extended to multiple-view geometry will be investigated in order to address the difficult problems of relative pose estimation, 3D registration, pose and velocity estimation, and SLAM (simultaneous localization and mapping).

Depth cameras will also be introduced as they are used more and more in robot perception.

At the end of the course the students will be able to:

- Understand what can be done from visual geometry
- Develop algorithms for visual odometry
- Develop algorithm for SLAM applications
- Perform 3D registration

Course contents

- Projective geometry
- Epipolar geometry (Homography, Essential and fundamental matrix)
- Multi view geometry
- Visual odometry
- Pose and velocity estimation
- 3D registration
- Visual SLAM (Mono, stereo)
- RGB-D cameras

Practical Sessions:

LAB1: Projective Geometry
LAB2: Two-views Geometry
LAB3: Visual Odometry

YEAR 2 - Autumn Semester

Aerial and maritime drones [DRONES]

LEAD PROFESSOR(S): Olivier KERMORGANT

Requirements

Dynamic modeling, basics of control.

Objectives

This course presents the state of the art and current challenges for aerial and underwater drones. It covers the modeling, state estimation and control of such robots. At the end of the course, students should be able to model drones, setup a state estimation scheme depending on the considered environment and perform position and velocity control with various approaches.

Course contents

- Maritime robots
 - o Applications and Technology
 - o Modeling: hydrodynamics, thrusters and fins
 - o Sensors: sonar, DVL, acoustic beacons
 - o Experimental and simulation challenges
 - o Control and state estimation
- Aerial drones
 - o Modeling of multi-rotor aerial vehicles
 - o Attitude and position control
 - o Trajectory tracking control
 - o Formation control of a fleet of drones and consensus
 - o Modeling of new aerial systems such as flying parallel robots

YEAR 2 - Autumn Semester

Soft Robot Modelling [SOROMO]

LEAD PROFESSOR(S): *Sebastien BRIOT*

Objectives

Objectives:

This course presents modelling techniques (geometric, kinematic and dynamic) for some classes of soft robots (for instance: concentric tube robots (CTRs), Tendon-driven continuum robots (TDCRs), Continuum parallel robots (CPRs)) made of thin deformable rods.

At the end of the course the students will be able to:

- Understand the fundamentals of the mathematical models of several classes of soft robots made of thin deformable rods.
- Be able to write their geometric and kinematic models based on ODEs / DAEs
- Analyze their stability performances
- Understand the mathematical fundamentals for the numerical solvers used in order to find the solutions to the model.
- Understand the mathematical fundamentals of some typical numerical integrators.
- Understand the mathematical fundamentals of some typical discretization techniques used in order to solve the ODEs/DAEs representing the robot models.
- Understand the basics of dynamics modeling of flexible rods.

Course contents

Teaching plan

Introduction to soft robots, concepts of continuum mechanics

Statics of the Cosserat rod

Geometrico-static models of tendon-actuated continuum robots (TACR), concentric tube continuum robots (CTR), continuum parallel robots (CPR)

Tangent geometrico-static models of TACR, CTR, CPR

Introduction to numerical methods (solvers, (Newton, Levenberg-Marquardt), integrators (Newton, Runge-Kutta, spectral integration, shooting methods, finite differences)

Stability analysis

Geometrico-static model of Cosserat rods on Lie groups, application to TACR, CTR, CPR

Strain-assumed modes method in statics

Practical Work: Labs will be set, involving modeling and simulation of robots. Experimental setup will serve to compare models with physical reality.

Course material

YEAR 2 - Autumn Semester

Task-based Control [TBC]

LEAD PROFESSOR(S): Olivier KERMORGANT

Objectives

This course presents the fundamentals of the modelling and control techniques used in sensor-based and task-based control. The course goes from visual servoing to hierarchical and model-predictive control.

At the end of the course the students will be able to:

- Understand the different properties of visual servoing schemes
- Know how and when to combine simple tasks to get a complex behavior
- Use hierarchical control to handle constraints or specific behavior the robot should have
- Understand the basics of model-predictive control

Course contents

The following subjects will be covered:

- Kinematic control of robots
- Visual servoing (2D, 3D, hybrid, image moments)
- Visual servoing applications (manipulators, mobile robots, aerial robots, parallel robots, humanoids etc)
- Redundancy and task priority
- Unilateral constraints in sensor space (object visibility, obstacle avoidance)
- Model-predictive control

All these aspects are detailed with their mathematical grounds.

Course material

- O. Kanoun, F. Lamiroux, P.-B. Wieber, Kinematic control of redundant manipulators: generalizing the task-priority framework to inequality task, IEEE Trans. on Robotics, 2011

Sustainable Development Goals (SDGs) covered by this course

Decent work and economic growth / Responsible consumption and production

Sustainable Development and Social Responsibility Positioning

This course covers basic and more advanced concepts to control robots or other complex systems. We highlight when to use complex approaches that can be CPU-intensive, and when simpler controllers are enough.

Assessment

Individual assessment: EVI 1 (coefficient 1)

English	5	20 hrs	0 hrs	10 hrs	0 hrs	2 hrs

Cultural and Communication English [CCE3]

LEAD PROFESSOR(S): David TROYA

Objectives

- Understand the fundamental principles of scientific writing and the importance of clarity and precision in communication.
- Structure scientific documents effectively, adhering to genre-specific conventions.
- Employ appropriate language and tone for diverse scientific audiences.
- Integrate and cite sources correctly to support research arguments and findings.
- Edit and revise their writing for coherence, style, and grammatical accuracy.
- Prepare and deliver scientific presentations, both written and oral.

Course contents

Introduction to Scientific Writing

Overview:

This course provides an essential foundation in scientific writing, equipping students with the skills necessary to effectively communicate research findings and scientific concepts. Through a combination of lectures, workshops, and practical assignments, students will learn the conventions of scientific writing, including structure, style, and clarity. The course will cover various types of scientific documents, such as research papers, literature reviews, grant proposals, and poster presentations.

Course Structure:

The course will be organized into weekly sessions that include lectures on theoretical concepts, hands-on writing exercises, peer review workshops, and discussions of exemplary scientific literature. Students will engage in collaborative projects and receive constructive feedback to enhance their writing skills.

Assessment:

Students will be assessed through a combination of assignments, including written documents, peer review participation, and presentations. Active participation in workshops and discussions is also required to foster a collaborative learning environment.

YEAR 2 - Autumn Semester

Spanish Language [ESP3]

LEAD PROFESSOR(S): Marta HERRERA

Requirements

N/A

Objectives

For beginners:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of vocabulary and linguistic structures

Be able to talk about yourself and those around you

Be able to express oneself during daily activities

Know how to give your opinion

For advanced students:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of specialised vocabulary

Be able to understand the essential content of concrete or abstract subjects including a technical discussion

Be able to communicate spontaneously and fluently

Be able to express oneself in a clear and detailed manner, to express an opinion on a topical subject

Course contents

For beginners:

Personal environment (introduce yourself, express yourself, your tastes, your character, your hobbies, etc.), your surroundings (friends, family, location, climate), your interests (sports, leisure)

Present tense (regular and irregular)

Language patterns to express habit, obligation, "gustar" and its equivalents,

Possessive adjectives

Differences between "es", "está", "hay"

Use of "por" and "para"

Adverbs and frequency patterns

Numeral adjectives

For advanced students:

Knowledge of the Hispanic world (economic, technical, cultural and social environment)

Present tense (regular and irregular)

Imperative

Past tenses

Direct / indirect style

Future tense

Conditional tense

Present and past subjunctive moods

Course material

Preparation manuals, our own tailor-made documents, written and internet press, general civilization documents, digital tools

Sustainable Development Goals (SDGs) covered by this course

Affordable and clean energy / Climate action / Decent work and economic growth / Gender equality / Good health and well-being / Industry, innovation and infrastructure / No poverty / Partnerships for the goals / Peace, justice and strong institutions / Quality education / Reduced inequalities / Responsible consumption and production / Sustainable cities and communities / Zero hunger

Sustainable Development and Social Responsibility Positioning

Key competencies for sustainability
 Collaboration: the abilities to learn, to understand and respect others; to deal with conflicts in a group; and to facilitate collaborative and participatory problem solving. Critical thinking: the ability to reflect on one's own values, perceptions and actions. Self-awareness: the ability to reflect on one's own role in a group; to continually evaluate and further motivate one's actions; and to deal with one's feelings and desires.

Master Programme - Control and Robotics - Advanced Robotics

YEAR 2 - Autumn Semester

French Language [FLE3]

LEAD PROFESSOR(S): *Silvia ERTL*

Requirements

N/A

Objectives

The objective is to familiarize the learner with the French language and French culture through an entertaining task-based communicative language teaching, focused on speaking combined with:

- Phonetics
- Self-correcting exercises on our learning platform
- Learning Lab activities
- Project work
- Tutoring

Course objectives include the acquisition and reinforcement of vocabulary, syntax, and pronunciation by both traditional means and through the use of digital resources. Students will learn general French, develop language skills of oral and written comprehension and expression.

After completing this course (32 hours + personal work), the students will be able to communicate in spoken and written French, in a simple, but clear manner, on familiar topics in the context of study, hobbies etc. Another important goal of this course is to introduce the student to French culture.

At the end of the course, complete beginners can achieve an A1 level and some aspects of the A2 of The Common European Framework of Reference for Languages. More advanced students may aim for B1/B2 levels. Those who already completed the first year of the French course will be prepared for working in a French business environment.

Course contents

Two different tracks are proposed: track 1 for students newly arrived at Centrale Nantes and track 2 for students who have completed the first year of the French course. Track 1:

Full range of practical communication language exercises: reading comprehension, listening comprehension, written expression, oral expression.

Learners will be able to use the foreign language in a simple way for the following purposes:

1. Giving and obtaining factual information:

- personal information (e.g. name, address, place of origin, date of birth, education, occupation)
- non-personal information (e.g. about places and how to get there, time of day, various facilities and services, rules and regulations, opening hours, where and what to eat, etc.)

2. Establishing and maintaining social and professional contacts, particularly:

- meeting people and making acquaintances
- extending invitations and reacting to being invited
- proposing/arranging a course of action
- exchanging information, views, feelings, wishes, concerning matters of common interest, particularly those relating to personal life and circumstances, living conditions and environment, educational/occupational activities and interests, leisure activities and social life

3. Carrying out certain transactions:

- making arrangements (planning, tickets, reservations, etc.) for travel, accommodation, appointments, leisure activities
- making purchases
- ordering food and drink

Track 2:

This track follows on directly from the first-year French course, developing and completing the concepts studied thus far. The main themes are: housing, health and work. These topics will help prepare students for their future work environment. For example, housing is explored in the form of a search for accommodation upon arrival in a new city. Special workshops for CVs and cover letters, elevator pitches and job interviews.

Course material

Preparation manuals, our own tailor-made documents, written and televised press, internet, general civilization documents, digital tools, our own educational materials on Hippocampus (Moodle).

Sustainable Development Goals (SDGs) covered by this course

Quality education

Sustainable Development and Social Responsibility Positioning

Targeted competencies extracted from: Education for sustainable development goals, learning objectives (UNESCO) <https://unesdoc.unesco.org/ark:/48223/pf0000247507> <https://www.coe.int/fr/web/common-european-framework-reference-languages/official-translations-of-the-cefr-global-scale>

YEAR 2 - Spring Semester

Master Thesis or Internship [THESIS]

LEAD PROFESSOR(S): Olivier KERMORGANT

Requirements

None

Objectives

- Be exposed to and adapt to an industrial or research environment
- Put in practice the scientific and technical skills acquired in the previous semesters
- Strengthen interpersonal and communication skills
- Be part of or manage a project
- Organize tasks, analyze results and build deliverables

Course contents

Students should be pro-active and career-oriented in the search for their thesis/internship. The topics are validated by the program supervisor to ensure an adequate Master level. The thesis/internship is evaluated through the submission of a written report and an oral defense.

Course material
