Master Programme - Marine Technology - Atlantic Master on Ship Operation and Naval Engineering (AMASONE)

YEAR 1 - Autumn Semester

Algorithmics for Engineering Modeling [ALEMO]

LEAD PROFESSOR(S): Domenico BORZACCHIELLO / Jose-Vicente AGUADO

Requirements

Objectives

At the end of the course the students will be able to:

- Identify and properly apply numerical methods to different engineering problems
- Understand algorithmic aspects and handle practical implementation issues
- Program and optimize algorithms in Python
- Use standard libraries for scientific computing
- Produce reports and notebooks using Jupyter

Course contents

The course proposes a gentle introduction to numerical methods in scientific computing and their respective algorithms through practical problems that are often encountered in engineering applications. It will cover five fundamental topics : interpolation and differentiation, numerical quadrature, time-stepping integration techniques for ordinary differential equations, iterative solvers and nonlinear solvers.

Each topic will be presented through a practical application, that will serve as a basis to review implementation aspects as well as theoretical principles of the numerical methods involved. Several exercises in Matlab/Octave are proposed.

Course material

- Slides and Course Notes
- Deepnote Labs
- An Introduction to Programming and Numerical Methods

Master Programme - Marine Technology - Atlantic Master on Ship Operation and Naval Engineering (AMASONE)

YEAR 1 - Autumn Semester

Fluid Mechanics 1 [FLUM1]

LEAD PROFESSOR(S): Guillaume DUCROZET

Requirements

Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Describe the main physical properties of a fluid.
- Identify the specificity of fluid mechanics in the continuum mechanics framework (i.e. compared to solid mechanics).
- Identify the non-dimensional numbers at play in any fluid mechanics problem and deduce how to perform experiments with appropriate similarity.
- Understand the notion of stresses and its representation through stress tensor.
- Describe the physical meaning of each term in the Navier-Stokes' equations
- Identify the different flow regimes.
- Evaluate the generalized force applied on any object in still water.
- Understand when the perfect fluid assumption is valid.

Course contents

This course aims to present the foundations and general principles of fluid mechanics. The lectures cover the following topics:

- Physics of fluids
- Dimensional analysis
- Stress tensors and fluids
- Navier Stokes' equations
- Flow regimes: introduction to turbulence
- Fluid statics
- Bernoulli's equation for a perfect fluid

In addition to those lectures, tutorials and lab sessions will allow the students to apply the theoretical knowledge to practical configurations.

Course material

- F. White, Fluid mechanics, McGraw-Hill, New York.
- B.R. Munson et al., Fundamentals of fluid mechanics, John Wiley, New York.

Maritime and Navigation knowledge [MANAK]

LEAD PROFESSOR(S): Antoine DUCOIN / Pascal LEBLOND

Requirements

Objectives

- To understand ship operations
- To understand merchant marine specificities
- To understand global maritime distress and safety system
- To understand maritime security rules

Course contents

- Presentation of ship specificities, ship-handling, organization.
- Navigation basic knowledge
- Maritime English (Merchant marine)
- Basic safety communication (GMDSS)
- Safety and security codes

Course material

- Ship handling book by H. Baudu (Ed. Dokmar)
- Le dictionnaire maritime thématique anglais et français (Ed. Presse Masson)
- IAMSAR Manual (Ed. IMO)
- ISM and ISPS Code (Ed. IMO)
- ALRS vol 5 (UKHO)

YEAR 1 - Autumn Semester

Marine Hydrodynamics 1 [MARHY1]

LEAD PROFESSOR(S): *Félicien BONNEFOY*

Requirements

Fluid Mechanics 1

Objectives

The objectives of this course are to provide students with a general overview of the use of hydrodynamics in marine and ocean engineering, including the modeling and physics of free surface flows, hydrostatics, and the stability of floating structures. This broad overview will be further explored in subsequent courses of the Master's program.

Course contents

Lesson 1 - Industrial R&D and Research Activities in Free Surface Hydrodynamics and Ocean Engineering
A comprehensive overview of the engineering problems and applied research related to hydrodynamics is presented.

Lesson 2 - Introduction to the Experimental Approach in Hydrodynamics
Physical problems that can be addressed using experimental methods and related facilities (such as towing tanks and wave tanks) are introduced.

Lesson 3 - Introduction to Wave-Structure Interaction
The spectral description of water waves is introduced, along with key concepts in marine structure design, including natural periods, buoyancy, wave loads, moorings, extreme loads, and fatigue.

Lesson 4 - Hydrostatics and Stability of Ships and Marine Structures
The intact and damaged stability of floating structures is examined through both theoretical and practical perspectives. Computer lab work is conducted using state-of-the-art industry software.

Course material

YEAR 1 - Autumn Semester

Numerical Methods [NUMME]

LEAD PROFESSOR(S): Grégory LEGRAIN

Requirements

Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Classify standard second order PDEs (elliptic, parabolic, hyperbolic)
- Solve simple elliptic problems by means of finite differences or finite elements
- Determine the level accuracy of the schemes they use (convergence order)
- Program finite differences and finite elements in both 1D and 2D

Course contents

These lectures aim to present standard numerical methods, their features and limitations.

- Classification of PDEs
- Classification of boundary conditions, well-posed problems
- Introduction to finite differences (1D, 2D)
- Introduction to finite elements (1D, 2D)

Homework and lab sessions will provide an understanding of the programming and main features of the methods.

Course material

- The Finite Element Method: Linear Static and Dynamic Finite Element Analysis. T.J.R. Hughes
- Numerical Methods for Engineers and Scientists. J.D. Hoffman and S. Frankel

YEAR 1 - Autumn Semester

Tools and Methods for Research 1 [TOME1]

LEAD PROFESSOR(S): Christian BURTIN

Requirements

Objectives

At the end of the course, the students will be able to:

- Write a scientific and technical paper on mechanical engineering area
- Establish the reasoning of scientific paper writing
- Present orally and clearly scientific data in the context of mechanical engineering
- Write the abstract on an article

Course contents

The goal is preparing undergraduate students to start a PhD or any relative research activity (academic or industrial) in the context of mechanical engineering. The course INTR is composed of four main parts :

Part A : lecture on IMRAD concept

Part B : Scientific paper reading and analysis based on IMRAD

Part C : Oral presentation and discussion

Part D: How to write the abstract of an article

These parts represent how to organize and publish (Part B and part D), how to communicate (Part C) and how to prepare and present a technical and scientific report (Part A). Applications are given for engineering works.

YEAR 1 - Autumn Semester

Cultural and Communication English [CCE1]

LEAD PROFESSOR(S): David TROYA

Requirements

Objectives

This course aims at improving your critical thinking and persuasion skills in English. Using documentaries, we will explore, discuss and debate a range of cultural, political, social, and environmental issues relevant to current world events.

Speaking and understanding English as a second or third language is a great achievement, but does it mean you are an effective communicator? The next step involves, among other things, critical thinking and persuasive skills, both of crucial importance in the modern professional environment. We will address these issues by analyzing documentaries that will lead to formal debates.

Several competencies will be developed through class exercises. Oral presentations will be an opportunity put your verbal as well as your non-verbal communication skills into practice. During debate, you will be able to sharpen your analytical skills, provide constructive feedback, defend an argument, and prove a point.

Course objectives

- Improving your communication skills
- Becoming an active listener
- Enhancing your non-verbal communication skills
- Developing critical thinking toward media
- Boosting leadership skills through moderating
- Organizing evidence and arguments

Course contents

Each session will be dedicated to a particular cultural, political, social or environmental topic of relevance in the wider anglophone world. Each topic will include multimedia material in the form of a short documentary or documentary excerpt. During class, students will lead a primer presentation, a moderated discussion and a formal debate.

Primer Presentation:

In pairs, you will hold a short talk to prime us on the topic of that week's documentary: you will introduce us to the topic by setting it in a wider context and establishing what's at stake.

Moderated Discussion :

In pairs, you will moderate a discussion related to the themes explored by the documentary. Moderators will come prepared with open-ended questions pertaining to the strengths and weakness of the documentary. They will distinguish between content and form and encourage critical, constructive opinions.

Formal Debate:

What's the difference between an opinion and an argument? You will soon find out. After the moderated discussion, we will brainstorm potential topics for debate, and follow the British Parliamentary model to sharpen your research, critical thinking, and persuasive skills.

During the debate, each speaker will be assigned an audience member who evaluates their individual performance and provides a short debrief. A panel of two judges will determine which side wins.

Course material

Written and televised press, information and digital tools, general documents, business environment and company strategies. Internet conferences (Ted Talks, etc.), our own educational materials on Hippocampus (Moodle).

YEAR 1 - Autumn Semester

Spanish Language [ESP1]

LEAD PROFESSOR(S): Marta HERRERA

Requirements

Objectives

For beginners:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of vocabulary and linguistic structures

Be able to talk about yourself and those around you

Be able to express oneself during daily activities

Know how to give your opinion

For advanced students:

Practice and reinforcement of the five skills (oral and written expression and comprehension as well as interaction)

Acquisition of specialised vocabulary

Be able to understand the essential content of concrete or abstract subjects including a technical discussion

Be able to communicate spontaneously and fluently

Be able to express oneself in a clear and detailed manner, to express an opinion on a topical subject

Course contents

For beginners:

Personal environment (introduce yourself, express yourself, your tastes, your character, your hobbies, etc.), your surroundings (friends, family, location, climate), your interests (sports, leisure)

Present tense (regular and irregular)

Language patterns to express habit, obligation, "gustar" and its equivalents,

Possessive adjectives

Differences between "es", "está", "hay"

Use of "por" and "para"

Adverbs and frequency patterns

Numeral adjectives

For advanced students:

Knowledge of the Hispanic world (economic, technical, cultural and social environment)

Present tense (regular and irregular)

Imperative

Past tenses

Direct / indirect style

Future tense

Conditional tense

Present and past subjunctive moods

Course material

Preparation manuals, our own tailor-made documents, written and internet press, general civilization documents, digital tools

Master Programme - Marine Technology - Atlantic Master on Ship Operation and Naval Engineering (AMASONE)

YEAR 1 - Autumn Semester

French Language [FLE1]

LEAD PROFESSOR(S): *Silvia ERTL*

Requirements

N/A

Objectives

The objective is to familiarize the learner with the French language and French culture through an entertaining task-based communicative language teaching, focused on speaking combined with:

- Phonetics
- Self-correcting exercises on our learning platform
- Learning Lab activities
- Project work
- Tutoring

Course objectives include the acquisition and reinforcement of vocabulary, syntax, and pronunciation by both traditional means and through the use of digital resources.

Students will learn general French, develop language skills of oral and written comprehension and expression.

After completing this course (32 hours + personal work), the students will be able to communicate in spoken and written French, in a simple, but clear manner, on familiar topics in the context of study, hobbies etc. Another important goal of this course is to introduce the student to French culture. At the end of the course (2 semesters), complete beginners can achieve an A1 level and some aspects of the A2 of The Common European Framework of Reference for Languages. More advanced students may aim for B1/B2 levels.

Course contents

Full range of practical communication language exercises: reading comprehension, listening comprehension, written expression, oral expression.

Learners will be able to use the foreign language in a simple way for the following purposes:

1. Giving and obtaining factual information:

- personal information (e.g. name, address, place of origin, date of birth, education, occupation)
- non-personal information (e.g. about places and how to get there, time of day, various facilities and services, rules and regulations, opening hours, where and what to eat, etc.)

2. Establishing and maintaining social and professional contacts, particularly:

- meeting people and making acquaintances
- extending invitations and reacting to being invited
- proposing/arranging a course of action
- exchanging information, views, feelings, wishes, concerning matters of common interest, particularly those relating to personal life and circumstances, living conditions and environment, educational/occupational activities and interests, leisure activities and social life

3. Carrying out certain transactions:

- making arrangements (planning, tickets, reservations, etc.) for travel, accommodation, appointments, leisure activities
- making purchases

- ordering food and drink

Course material

Preparation manuals, our own tailor-made documents, written and televised press, internet, general civilization documents, digital tools, our own educational materials on Hippocampus (Moodle).

Energetics [ENERG]

LEAD PROFESSOR(S): Xavier TAUZIA

Requirements

basics of thermodynamics

Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Understand a complex energetic system
- Make a comprehensive application of the laws of thermodynamics
- Determine the pertinent information to describe the system
- Identify the nature of the transformations
- Establish an equation of energy balance
- Calculate the characteristic parameters of a two-phase flow
- Calculate the power and efficiency of different thermal machines
- Calculate heat flux in processes involving conduction and convection

Course contents

The main objective of the course is for students to acquire the fundamental principles of thermodynamics and to apply them to the study of industrial processes involving energy transformation or transfer phenomena. The main elements covered in the course are:

- Principles of thermodynamics and selected elementary results: closed/open systems, perfect and real fluids.
- Energy transformations-compressors, nozzles, turbines, expander.
- Phase transitions: properties of mixtures, thermodynamic tables and diagrams.
- Thermodynamic cycles and thermal machines. Direct cycles: Carnot, Rankine, Hirn, reheating cycles, Joule's cycle, Otto and Diesel cycles.
- Introduction to turbocharging.
- Inverse compression cycles: Carnot and Joule's cycles, heat pump, refrigeration and air conditioning. Humid air. Steam absorption cycles.
- Thermodynamics of unbalanced systems - general principles. Heat transfer. Newton and Fourier's laws.
- Thermodynamic study of heat radiation. Black bodies, Planck, Stefan, and Kirchoff laws.

Course material

- Thermodynamique et énergétique, M. BOREL (Presses polytechniques Romandes)

Fluid Mechanics 2 [FLUII]

LEAD PROFESSOR(S): Guillaume DUCROZET

Requirements

Fluid Mechanics 1

Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Apply the potential flow theory to simple configurations in fluid dynamics.
- Identify the limitations of the potential flow theory.
- Identify the sources of head loss in an internal flow.
- Evaluate the necessary power of a pump in a hydraulic system.
- Calculate the forces exerted on an object in a flow using Euler's theorem.
- Design experimental facilities for head loss identification and force measurements.

Course contents

This course is a follow-up to 'Fluid Mechanics 1', which presents the fundamentals and general principles of fluid mechanics. The aim is now to provide simple tools/formula to extract global information which is useful from an engineering point of view for fluid mechanics problems. The lectures cover the following topics:

- Potential flows
- Transport theorems and integral balances in fluid mechanics
- Head losses and the generalized Bernoulli's equation
- Momentum balance: Euler's theorem

In addition to those lectures, tutorials and lab sessions (4 3h-lab sessions) will allow the students to apply the theoretical knowledge to practical configurations.

Course material

Labs in Propulsion Systems [LABPRO]

LEAD PROFESSOR(S): Antoine DUCOIN

Requirements

Objectives

This class aims at getting practical knowledge in thermal machines. It is composed by two labworks:

1-Simulation labwork AMESim :

- Simulate an internal combustion engine with a commercial software based on 3D/1D model (AMESim)
- Optimize some design and control parameters using the simulation

2-The experimental labworks are divided into two parts

- The objective of Lab 1 is to visually and physically identify the different components that make up a internal combustion engine.

To do this, instrumentations together with an engine placed in a test facility are made available to a group of students so that they can disassemble, view and reassemble this engine.

-The aim of Lab 2 is to experimentally evaluate some aspects of the operation of a turbocharged diesel engine. An engine test bench and a control system are made available to a group of students. Various parameters can be modified under real conditions in order to assess their impact on engine performance.

Course contents

1- Simulation labwork AMESim :

- how to build a model by using a multi-physic approach
- how to perform a simulation and analyze the results
- how to use the simulation to modify the design and the calibration of the engine to optimize the performances, the efficiency and reduce the emissions.

2-The experimental labwork is composed of 2 labs of 4 h :

Lab 1 : Engine disassembly and reassembly

Lab 2: Diesel Engine Test Bench

YEAR 1 - Spring Semester

Marine Hydrodynamics 2 [MARHY2]

LEAD PROFESSOR(S): Antoine DUCOIN

Requirements

Objectives

Objectives

The objectives of this course are to give a general overview to students about:

- Classes of approximation in hydrodynamics for modelling of some typical problems
 - numerical simulation in Hydrodynamics
 - specificities of flows around lifting profiles and their application to naval engineering or Marine Renewable Energies
- This global overview will be then detailed in other courses of the Master program.

After completing the course, students will be able to:

- Classes of approximation in hydrodynamics:
 - Know which mathematical models are available in hydrodynamics for ocean engineering
 - Select which mathematical models are adapted for different typical problems in ocean engineering
- Numerical simulation:
 - Methodology for numerical simulation: how to go from modelling to analysis of results
 - How is numerical simulation used in marine hydrodynamics at present time?
- Lifting profiles:
 - Design a blade for marine propellers and wind/tidal turbines applications
 - Calculate performance using potential flow theory
 - Determine which flow regime could occurs around the lifting profile and be able to determine its direct effect on hydrodynamic performance

Course contents

Introduction to Numerical Simulation

- Following parts will be described: Methodology for numerical simulation of a physical problem
- Space and time discretization
- Discrete equations solving
- Convergence, verification and validation

Lifting profiles

The objective is to understand the fundamentals of lifting profiles, focusing on the specificity of marine applications. We will focus on the main operating principle, followed by an understanding of flow physics around marine profiles and their resulting performances. The theory focuses on potential flow theory to calculate the flow around a lifting profile, and to obtain the performances.

- Basics and applications
- Flow physics – hydrodynamics: characterization of flow regimes, performance analysis
- Methods and theory: thin profiles theory, lifting line theory
- Tutorial: calculate the performances of a NACA section using the thin profile theory
- Lab sessions: coding of lifting line theory using Matlab to analyse the effect of various blade geometries and aspect ratio on the hydrodynamic performances

Propulsion [PROPUL]

LEAD PROFESSOR(S): Georges SALAMEH

Requirements

energetics

Objectives

At the end of the course (30 hours + personal work) the students will be able to:

- Describe the main parts of a reciprocating piston engine and of an automotive powertrain
- Distinguish between various types of engine: 4 stroke/2 stroke; SI/CI; NA/supercharged/turbocharged
- Describe the main internal processes and their interactions
- Calculate theoretical cycles
- Evaluate engine performance and efficiency
- Describe the main parts of a gas turbine and a turbojet/turbofan

Course contents

These introductory lectures aim to present the main characteristics of IC engines, the main thermofluid processes involved and the main performance and energy conversion calculations.

This course also presents briefly gas turbine and aircraft engines. The contents are as follows:

- Main engine parts
- Theoretical cycles
- Geometrical characteristics
- Performance and efficiency indicators
- Intake and exhaust systems
- Supercharging and turbocharging - downsizing
- Types of fuel and fuel systems
- Combustion (SI and CI) and emissions – after-treatment
- Automotive powertrain: clutch, manual gearbox, automatic GB, CVT, power requirement, hybridization
- Gas turbines and aircraft engines

Thermal Machines [THEMA]

LEAD PROFESSOR(S): Antoine DUCOIN

Requirements

Objectives

The objective of this course is to introduce the specificity of naval propulsion devices.

Course contents

The first part of the course presents a list of different systems dedicated to naval propulsion (sail, internal combustion engine, nuclear) and their application depending on the ship type.

There will be a focus on marine diesel engines and their application in the naval field.

The second part of the course presents the power transmission on a ship and different types of propulsion devices (wheels, propellers, hydrojets etc). This part concludes with practical applications and a visit by a marine diesel manufacturer.

Cultural and Communication English [CCE2]

LEAD PROFESSOR(S): David TROYA

Requirements

Objectives

Interview techniques and communicational English:

- Understand the general concepts of interactive communication
- Build a media project
- Acquire interview techniques
- Understand the process of sourcing and checking facts and figures
- Understand issues related to plagiarism
- Create a bibliography
- Behavioral skills in an inter-cultural environment:
- Strengthen self-confidence and capacity for interaction
- Develop active listening and reformulation skills
- Develop networking skills

Course contents

Cultural and Communicational English: exercises to explore in practice the areas of culture and communication.

Media project (for example: prepare, conduct and promote interviews for a radio programme: L'Heure Centralienne (<http://www.euradionantes.eu/emission/l-heure-centralienne>), with the contribution of professors, PhD students, industrial partners, industry players at fairs, etc.

Master Programme - Marine Technology - Atlantic Master on Ship Operation and Naval Engineering (AMASONE)

YEAR 1 - Spring Semester

French Language [FLE2]

LEAD PROFESSOR(S): *Silvia ERTL*

Requirements

N/A

Objectives

The objective is to familiarize the learner with the French language and French culture through an entertaining task-based communicative language teaching, focused on speaking combined with:

- Phonetics
- Self-correcting exercises on our learning platform
- Learning Lab activities
- Project work
- Tutoring

Course objectives include the acquisition and reinforcement of vocabulary, syntax, and pronunciation by both traditional means and through the use of digital resources.

Students will learn general French, develop language skills of oral and written comprehension and expression.

After completing this course (32 hours + personal work), the students will be able to communicate in spoken and written French, in a simple, but clear manner, on familiar topics in the context of study, hobbies etc. Another important goal of this course is to introduce the student to French culture. At the end of the course (2 semesters), complete beginners can achieve an A1 level and some aspects of the A2 of The Common European Framework of Reference for Languages. More advanced students may aim for B1/B2 levels.

Course contents

Full range of practical communication language exercises: reading comprehension, listening comprehension, written expression, oral expression.

Learners will be able to use the foreign language in a simple way for the following purposes:

1. Giving and obtaining factual information:

- personal information (e.g. name, address, place of origin, date of birth, education, occupation)
- non-personal information (e.g. about places and how to get there, time of day, various facilities and services, rules and regulations, opening hours, where and what to eat, etc.)

2. Establishing and maintaining social and professional contacts, particularly:

- meeting people and making acquaintances
- extending invitations and reacting to being invited
- proposing/arranging a course of action
- exchanging information, views, feelings, wishes, concerning matters of common interest, particularly those relating to personal life and circumstances, living conditions and environment, educational/occupational activities and interests, leisure activities and social life

3. Carrying out certain transactions:

- making arrangements (planning, tickets, reservations, etc.) for travel, accommodation, appointments, leisure activities

- making purchases
- ordering food and drink

Course material

Preparation manuals, our own tailor-made documents, written and televised press, internet, general civilization documents, digital tools, our own educational materials on Hippocampus (Moodle).
